Surface Roughness Testers

Durable roughness testers for shop floor, industrial & inspection room applications

Working closely with manufacturers across a wide range of industries including precision bearings, automotive and aerospace engineering, Starrett focuses on the key attributes that are most important for quality control in today's precision industries.

The new SR300 and SR400 instruments offer a versatile solution for all your roughness requirements with a variety of systems and application specific accessories along with fixtures that can be tailored to your specific need.

USB Connectivity

Through its industry standard Type A USB port and mini USB port the SR series instruments provide extensive connectivity options to many standard devices.

USB type A

The Type A USB port can be used to attach a portable printer (ESC/POS compatible), see 'Accessories' page or a standard USB storage device for recording results, raw data or screen images.

USB mini

The mini USB port can be used for charging (with any standard USB charger) and / or connection to a PC to provide further analysis and reporting functionality.

SR series

A range of roughness testers robust enough for the shop floor and flexible enough for any inspection room.

Measure

Tactile measurement button, great when device is being used overhead or inside pipes

Lift/lower

Supplied as standard providing 50 mm height adjustment, right angle measurement and 70 mm reach into bores

Anti-slip feet

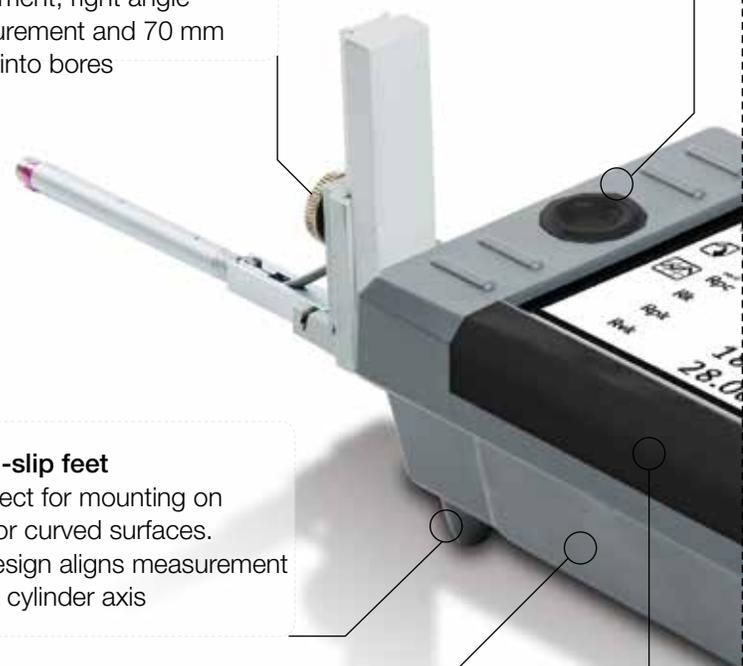

Perfect for mounting on flat or curved surfaces. V design aligns measurement with cylinder axis

Comfort grip

Sits comfortably in the hand when reviewing results or changing settings

Rubberized moulding

Added protection and better grip in the hand invaluable in shop floor environments

- Improve throughput
- Reduce part scrappage
- Monitor tool wear
- Ensure traceability

Features

Any surface, any height

The inclusion of a 50mm stylus lift with right-angle attachment and more than 70mm stylus reach means that even the most challenging surfaces can be measured without the need for expensive riser blocks, stands or fixtures. The anti-slip V-feet also mean the system can be used on flat or curved surfaces. The stylus can even measure upside down!

Standards and traceability

The reference standard supplied can be used both to calibrate the instrument and check for stylus wear to ensure the most accurate results are always being achieved.

Measurement	Best capability
Roughness standards (Ra)	$\pm(2\% + 0.004\mu\text{m})$
Workpiece or component surface texture (Ra)	$\pm 3\%$ of measured value per track

Profile graph

Detailed graph shows measured area to help identify problem areas

Simple set up

Shortcuts provided for all the key settings to give instant access with just a single touch

USB mini

for charging (with any standard USB charger) and / or connection to a PC for data transfer

USB type A

attach a portable printer or USB storage device

Orientation

Fix the display in 1 of 4 orientations perfect for awkward measurements
