ID-C/ID-F

New-generation ID series making measurement operations smoother and enhancing production quality

Bidirectional serial communication that helps increase work efficiency

Meeting the need for more precise measurements

A wide range of support functions for smoother measurement work

ID-C Series

ID-F Series

*The ID-C series does not have illuminated backlighting.

When tolerance judgment result indicates failure

Enabling more precise measurement 20 μinch/0.5 μm resolution

The ID-C and ID-F ranges now include models with 0.0005 mm resolution. The units are also capable of resolution switching.*

*Except for the ID-C 0.01 mm resolution model

Avoid missing a pending calibration Calibration period notification function

The LCD displays an icon to notify the user when the set calibration time approaches. This facilitates the proper precision management of ID-C/ID-F.

Notification icon

The calibration period notification icon starts blinking at a set time before calibration is due (e.g. 1 week before the calibration date). If the deadline is exceeded, the entire screen starts blinking to notify the user.

The first Mitutoyo measuring tools to support bidirectional serial communication. Dramatically improve work efficiency by connecting and linking with a PC.

The ID-C/ID-F units are Mitutoyo's first measuring tools to support bidirectional serial communication.* They can be easily connected and linked with a PC via a USB input tool, etc., and in addition to conventional measurement data collection, they also enable control and setting of the ID-C/ID-F units, collection of gauge information, and other operations to be performed in batch from the PC. This contributes to drastic improvement in work efficiency.

*Achieved through I/F compatible with an original bidirectional serial communication specification (Digimatic S1). ▶ See P.6 for details.

● An optional cable and measurement data input unit are required for bidirectional serial communication. ● USB-ITPAK V3.0 must be installed on the PC used for communication.

Function example (1) Control of ID-C/ID-F from PC

New model (ID-C/ID-F + USB-ITPAK V3.0)

- Batch zero setting and power ON/OFF operation, etc. of multiple ID-C/ID-F units is made possible by use of the dedicated software "USB-ITPAK."

Function example (2) Measuring instrument setting

New model (ID-C/ID-F + USB-ITPAK V3.0)

- Various functions of ID-C/ID-F units can be set from USB-ITPAK.
- The contents of various function settings can be saved on a PC, and the same settings can be copied to other ID-C/ID-F units.

➔ **Reduced work time for setting**

Old model (Old ID-C/ID-F + USB-ITPAK V2.1)

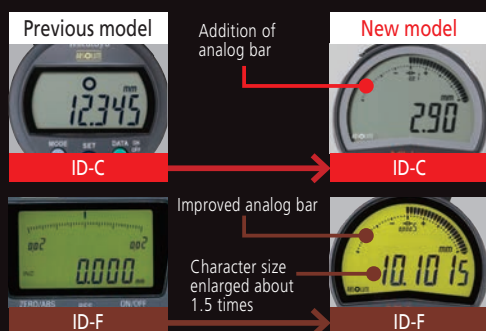

- For older ID-C/ID-F units that do not support bidirectional serial communication, zero setting must be performed individually on each unit.

Old model (Old ID-C/ID-F + USB-ITPAK V2.1)

- Since bidirectional serial communication is not supported, function setting from a PC is not possible.

Improved work efficiency thanks to excellent readability Large screen and analog bar

The units have large screens that can display various information in an easy-to-read manner. They also have an analog bar, convenient for observing subtle movements such as the approach to tolerance.

Setting of frequently used functions for easy operation Three large buttons

Ease of use is greatly improved by three large buttons. You can freely set any frequently used functions to these buttons.

1 Parameter setting mode

- Counting direction switching
- Tolerance judgment function setting
- Calculation function setting
- Resolution switching
- Function lock setting

2 Switching between ABS length measurement system

- (presetting) and INC length measurement system (zero setting)

3 Power ON/OFF

- Data output (when connected to an external device)
- Data hold (when not connected to an external device)

Improved measurement work efficiency Simple calculation function

The result of the spindle movement value multiplied by the calculation coefficient can be displayed in real time. This reduces the work of measuring with a jig or similar tool.

$$f(x) = Ax$$

f(x): Displayed value

x: Spindle movement value

A: Selected value

Software

USB-ITPAK V3.0 FULL version dongle

USB dongle

Measurement data collection software USB-ITPAK V3.0 can be downloaded from our website. The above dongle is required to use the full functions.

No.06AGR543

Measurement data collection software
USB-ITPAK V3.0

SOFTWARE Reduces the time and effort needed for inspection work

Measurement data collection software

USB-ITPAK V3.0

USB-ITPAK is useful software to create procedures when inputting measurement data into Excel sheets. The latest version allows the user to perform batch power-on for ID-C/ID-F units, batch power-off at the end of measurement, batch zero setting and presetting, data acquisition instruction from a PC, etc.

Equipped with an automatic sorting function for sorting input measurement data [Easy input mode]

This function can be implemented even if the measuring instrument does not support bidirectional serial communication. After setting, measurement values are automatically sorted into an Excel sheet as needed.

Only the number of measurement items is preset. (Example: number of measurement items = 3)

- 1 D: 10 mm
- 2 H: 20 mm
- 3 W: 30 mm

With normal input (Entered into column A only.)

	A	B
1	10.11	
2	20.05	
3	29.99	
1	10.54	
2	20.45	

With automatic sorting function

(Once entered into column A, similar data is automatically classified.)

	A	B	C	D	E
1	10.11		10.11	20.05	29.99
2	20.05		10.54	20.45	29.5
3	29.99		9.78	20.3	30.4
1	10.54		9.99	20.07	30.22
2	20.45				

Simplifies measuring instrument setting

Batch setting of ID-C/ID-F units can be performed from your PC. Moreover, the settings can be saved on your PC and set to other ID-C/ID-F units. You can perform settings without even touching the ID-C/ID-F units.

Whatever your challenges are, Mitutoyo supports you from start to finish.

Mitutoyo is not only a manufacturer of top quality measuring products but one that also offers qualified support for the lifetime of the equipment, backed by comprehensive services that ensure your staff can make the very best use of the investment.

Apart from the basics of calibration and repair, Mitutoyo offers product and metrology training, as well as IT support for the sophisticated software used in modern measuring technology. We can also design, build, test and deliver measuring solutions and even, if deemed cost-effective, take your critical measurement challenges in-house on a sub-contract basis.
