LGH-0510

Measurement principle

Optical transmission-type linear encoders

The gage heads mainly use optical transmission-type linear encoders, the principle of which is shown below. In this type, the light source (LED) and the detector element (photodiode) face each other with the main scale and index scale (20 μm pitch) positioned between them. As the scale moves with respect to the detector, the intensity of the light passing through the window in the index scale varies constantly. At this time, two synchronized sine-wave signals having a relative 90-degree phase difference are output.

These signals are then amplified and split electrically (with additional waveforms inserted) and output as 0.1 μm , 0.5 μm or 1 μm square-wave signals.

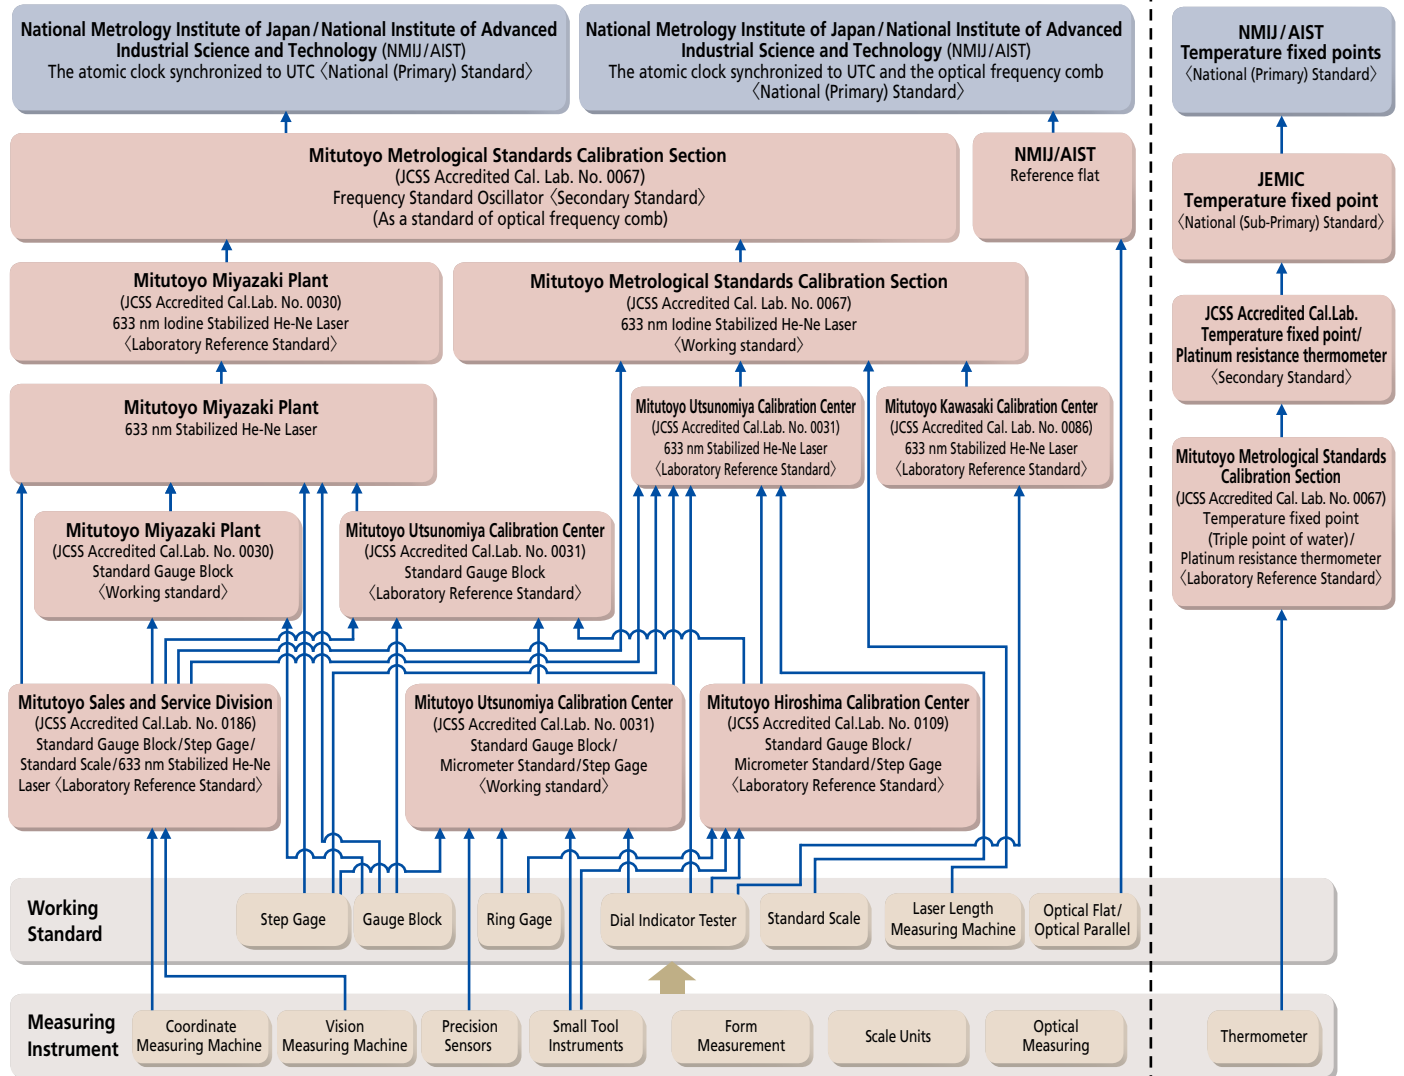

Traceability of Mitutoyo Standards

As of July, 2021

Traceability of Length Field

Traceability of Temperature

Note: This chart shows a simplified traceability system of Mitutoyo. Detailed traceability charts are published for each product.

Applications

Precision Parts Manufacturing

① Roll gap measurement

② PCB thickness measurement

③ Chip parallelism measurement

4 Seating check

6 FPD board multipoint measurement

5 Measurement of crimping height

7 Parallelism measurement of copying machine parts

Applications

Automobile Manufacturing Process

1 Cam-lift measurement

2 Brake disc multipoint measurement

5 Flatness measurement

6 Workpiece height detection

③ Machine device tool length measurement

④ Workpiece discrimination

⑦ Workpiece runout measurement

⑧ Inspection fixture

- High-accuracy gage head suitable for in-line and in-laboratory use.
- Assures the expected repeatability (2σ) in the full measurement range and the narrow-range precision.
- Protection grade IP67G with sliding durability of 50 million times and more*¹ and adoption of highly oil-resistant materials.
 - *1 10 mm range models (Actual value from in-house tests)
- All models have the origin point signal output function to restore the origin point position after recovery from problems such as overspeed.
- It can be connected to a compact counter (**EJ** counter) suitable for in-line use or building into a device or a multifunctional counter (**EH** counter)*² suitable for use in measurement rooms.
 - *2 A conversion plug is required.

Connector

Optional Accessories

- Air lifter
 - For 10 mm range models: **02ADE230**
 - For 25 mm range models: **02ADE250**
 - For 50 mm range models: **02ADE270**
- Note 1: Required air pressure: 0.2 to 0.4 MPa (With a 0.1 μm resolution type: 0.2 MPa)
- Note 2: Spindle extends when air is supplied.

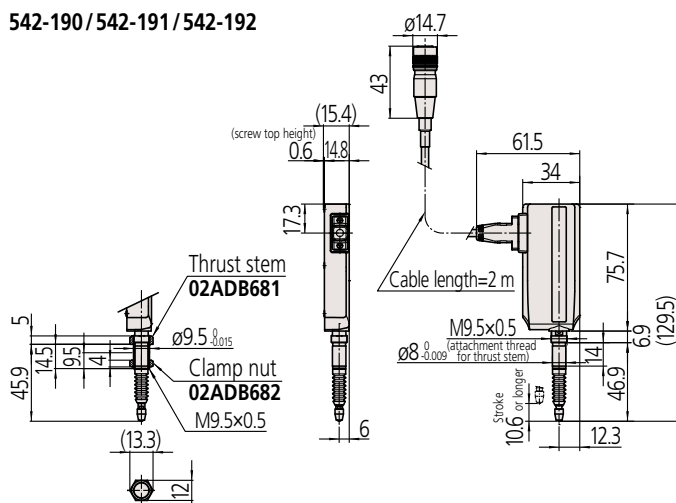

- Rubber boot (spare)
 - For 10 mm range models: **21HAA331**
 - For 25 mm range models: **21HZA176**
 - For 50 mm range models: **21HZA184**
- Note 3: Dimensions are shown in the external dimensions drawing of the product.
- Thrust stem set:
 - For 10 mm range models: **02ADB680** (Thrust stem: **02ADB681**, Clamp nut: **02ADB682**)
 - For 25/50 mm range models: **02ADN370** (Thrust stem: **02ADN371**, Clamp nut: **02ADB692**)
 - This is a combination of thrust stem and a clamp nut.
- Spanner wrench:
 - For 10 mm range models: **02ADB683**
 - For 25/50 mm range models: **02ADB693**
 - If required, spanner wrench is required for tightening. If using multiple gages, a thrust stem set is required for each gage and one spanner wrench.
- Extension cable
 - 5 m: **21HZA197**
 - 10 m: **21HZA198**
 - 20 m: **21HZA199**
- Note 4: Connectable up to 3 pieces, 20 m at maximum.
- Conversion Plugs / Cables
 - Plug connection to EH-101P/102P: **21HZA195**
 - Plug connection to EH-102Z: **21HZA196**
 - Cable connection to EH-101P/102P: **21HZA260**
 - Cable connection to EH-102Z: **21HZA261**
- Note: Connectable to EH-102Z but the function of reference point detection is disabled.

Custom order example

- Measuring force change
- Cable length change (less than 2 m)
- Connector change

LGH

- This series has achieved very high accuracy combined with a resolution of 0.01/0.005 μm (according to model), practically equivalent to that of a laser interferometer, and a wide measuring range of 10 mm.
- A compact body design makes a significant contribution to a downsizing of this gage itself, which is best suited for calibration/evaluation of master gages as well as measurement of high-precision parts and as a length measuring sensor incorporated into high-precision positioning/control units.
- A low measuring force model is available for those applications where measurement of easily deformed or damaged workpieces is required.
- Every **LGH** Series gage is bundled with a dedicated counter.

Gage head 542-715A

- This model is equipped with a newly developed optical reflection-type linear encoder, achieving an excellent resolution of 0.01 μm , a measuring accuracy of 0.2 μm and a measuring range of 10 mm at a low price.
- Maximum operating speed has been improved by a factor of 2.8 times (250 mm/s \rightarrow 700 mm/s) while maintaining very high accuracy.

Gage head 542-720A

- This model is equipped with a newly developed ultra-high precision transmission type linear encoder, achieving the outstanding resolution of 0.005 μm (5 nm).
- Exceptional measuring accuracy of 0.1 μm has been attained over the wide measuring range of 10 mm. This series is most suited for calibration/evaluation of master gages where its wide measuring range is a great advantage.

Dedicated counter (included)

TYPICAL APPLICATIONS

Master gage calibration/evaluation

Inspection of high-precision parts

- Rubber boot (spare): **238774**
- Air lifter (metric): **903594**
- Air lifter (inch): **903598**
- SPC cable extension adapter: **02ADF640**
- Extension cable for Digimatic gages (0.5 m): **02ADD950**
- Extension cable for Digimatic gages (1 m): **936937**
- Extension cable for Digimatic gages (2 m): **965014**

Note: When connecting an extension cable, an SPC cable extension adapter is required.

Custom order example

- Measuring force change
- Cable length change
- Connector change

Optional Accessories

Air Lifter

- Advances or retracts the spindle of a gage head by using a pneumatic cylinder.
- Automatic measurement is possible by using a solenoid valve.

Unit: mm
25.4mm=1"

Air lifting unit LGS

For LGS: 903594 (mm), 903598 (in)

For 10 mm LG100/LG200: 02ADE230

For 25 mm LG100: 02ADE250

For 50 mm LG100: 02ADE270

SPECIFICATIONS

| Order No. | 903594 | 903598 | 02ADE230 | 02ADE250 | 02ADE270 |
|----------------------|------------------|--------|--|----------|----------|
| Stroke | 10 mm | 0.4 in | 10 mm | 25 mm | 50 mm |
| Compatible gage head | LGS-1012P | | LG100/LG200 Series (10 mm only) | | |

| Mass | 60 g | | 150 g | 250 g | 300 g |

* An overspeed error may occur depending on the usage environment and conditions. In case of an error, adjust the air pressure and flow rate to be used.

Head Specifications (Accessories)

Gage Head Mounting Fixtures

Mounting with a thrust stem

A thrust stem is available as an option for the **LG100**, and **LG200** gage heads. Installing a thrust stem on the stem allows direct mounting, simply by drilling a hole in a section of suitable thickness on the fixture.

For 10 mm **LG100/LG200** Components Thrust stem: **02ADB681**
Clamp nut: **02ADB682**
Wrench: **02ADB683**

Note: A mounting section with a thickness of 6 through 10.5 mm is suitable. With the use of a thrust stem and clamp nut, a gage fixture can be arranged simply by drilling a 9.5 mm dia. hole. A gage can be secured firmly with ease with this arrangement.

IMPORTANT

In attaching a thrust stem, be sure to fix the stem first with a dedicated wrench (**02ADB683**). An excessive force applied between the gage main body and stem may cause damage to the gage.

NOTE

Both the dedicated wrench (**02ADB683**) and M9.5x0.5 threaded section are for mounting a thrust stem. Do not use them for any purpose other than mounting a thrust stem.

For 25 mm **LG100** Components Thrust stem: **02ADN371**
Clamp nut: **02ADB692**
Wrench: **02ADB693**

Note: A mounting section with a thickness of 10 through 12 mm is suitable. With the use of a thrust stem and clamp nut, a gage fixture can be arranged simply by drilling an 18 mm dia. hole. A gage can be secured firmly with ease with this arrangement.

IMPORTANT

In attaching a thrust stem, be sure to fix the stem first with a dedicated wrench (**02ADB693**). An excessive force applied between the gage main body and stem may cause damage to a gage.

NOTE

Both the dedicated wrench (**02ADB693**) and M14x0.5 threaded section are for mounting a thrust stem. Do not use them for any purpose other than mounting a thrust stem.

For 50 mm **LG100** Components Thrust stem: **02ADN371**
Clamp nut: **02ADB692**
Wrench: **02ADB693**

Note: A mounting section with a thickness of 10 through 12 mm is suitable. With the use of a thrust stem and clamp nut, a gage fixture can be arranged simply by drilling an 18 mm dia. hole. A gage can be secured firmly with ease with this arrangement.

IMPORTANT

In attaching a thrust stem, be sure to fix the stem first with a dedicated wrench (**02ADB693**). An excessive force applied between the gage main body and stem may cause damage to a gage.

NOTE

Both the dedicated wrench (**02ADB693**) and M14x0.5 threaded section are for mounting a thrust stem. Do not use them for other purpose than mounting a thrust stem.

SPECIFICATIONS

| Compatible gage | LG100/LG200 10 mm | LG100 25/50 mm |
|--|-------------------|-------------------|
| Thrust stem set* | 02ADB680 | 02ADN370 |
| Thrust stem | (02ADB681) | (02ADN371) |
| Clamp Nut | (02ADB682) | (02ADB692) |
| Wrench | 02ADB683 | 02ADB693 |
| Gage mounting hole diameter (nominal) | ø9.5 mm | ø18 mm |
| Recommended plate thickness (mounting section) | 6 to 10.5 mm | 10 to 12 mm |

* A thrust stem set is comprised of a thrust stem and clamp nut. A dedicated wrench is required for tightening. To use more than one gage, purchase thrust stem sets for the number of gages plus a special spanner.

Optional Accessories

Spare rubber boot

Protects the spindle bearing of a gage head from dust.

SPECIFICATIONS

| Order No. | Compatible Gage head |

Extension signal cable for LG100/LG200

A signal cable from the head to the receiver circuitry can be extended. Maximum number of connectable cables is limited to 3, and the maximum total extension length is limited to 20 m.
 Custom order: Flexible cable type
 Custom order: Customizable cable length

SPECIFICATIONS

| Order No. | Cable length |
|-----------------|--------------|
| 21HZA197 | 5 m |
| 21HZA198 | 10 m |
| 21HZA199 | 20 m |

Digimatic cable extension adapter

02ADF640 Mass: 15 g
 This adapter can be used when the **LGS-1012P** gage head is to be connected to a display unit where the provided cable length is not sufficient for this connection.

- Available for **LGS-1012P**.
- Available for **EC-101D, EH-102D**
- Do not join more than one piece of this product together for use.

Lifting lever and attachment holder

This holder is attached between the spindle and the contact point for fixing the lifting lever.

SPECIFICATIONS

| Order No. | |

Optional Accessories

Measuring stand

**Granite comparator stand
BSG-30HX 215-156-10**

| | |
|-----------------|--------------------------|
| Base material | Granite |
| Base size (mm) | W 250×D 300×H 95 |
| Base flatness | 3.5 μm |
| Fine adjustment | Square thread |
| Stem size (mm) | ø20, ø9.53, ø8 with bush |

LG100 25 mm/50 mm. When using the stand at 25 mm/50 mm stroke, separately obtain a ø15 bushing (21JAA331).

**Comparator stand
BSC-30HX 215-505-10**

| | |
|-----------------|--|
| Base material | Hardened steel, Grooved measuring stage |
| Base size (mm) | W 179×D 255×H 89 (Measuring stage □150×H25) |
| Base flatness | 2.3 μm |
| Fine adjustment | Square thread |
| Stem size (mm) | ø20, ø9.53, ø8 with bush |

LG100 25 mm/50 mm. When using the stand at 25 mm/50 mm stroke, separately obtain a ø15 bushing (21JAA331).

Measuring stand for Laser Hologage 971750

This **LGH** stand greatly helps the gage to achieve high accuracy.
Mass: 25 kg

Mounting holder A, B

Useful when the **LGH** is mounted on an alternate fixture rather than the regular measuring stand.

Holder A **971751** Mass: 250 g
Holder B **971752** Mass: 180 g

Release with damper

Spindle-lift release for the **LGH**. A sudden drop of the spindle is prevented by the return-speed adjustment knob.

971753 Mass: 50 g

Differential square-wave

| Model (Resolution) | LG100/LG200 (0.1 μm) | LG100/LG200 (0.5 μm) | LG100/LG200 (1 μm) |
|------------------------------|--|----------------------|--------------------|
| Output signal | 90° phase difference, differential square wave (RS-422A equivalent) | | |
| Signal pitch | 0.4 μm | 2 μm | 4 μm |
| Minimum edge interval | 250 nsec | | 500 nsec |
| Output signal level | +5 V (4.8 to 5.2 V, 80 mA) $\bar{\theta}A$, $\bar{\theta}A$, $\bar{\theta}B$, $\bar{\theta}B$: TTL, line driver output, AM26LS31 or equivalent | | |
| Plug type | HR10A-10P-10P (HIROSE) | | |
| Compatible socket | HR10A-10R-10S (HIROSE) | | |
| Recommended receiver | Differential input, line receiver, AM26LS32 | | |
| Gage connecting cable length | 2 m; directly connected to the gage | | |
| Extension cable length | Max. 20 m (extension cables of 5, 10 and 20 m in length are available) | | |
| Error output | See the "Timing chart (occurrence of error)" below | | |
| Voltage/Consumption | +5 V (ripple voltage 0.2 Vpp max.)/80 mA | | |

Output pin assignment

1) Output plug HR10A-10P-10P (HIROSE)

2) Pin assignment

| Pin No. | Assignment | Pin No. | Assignment |
|---------|------------|---------|------------|
| 1 | PA | 7 | N.C. |
| 2 | PA | 8 | PZ |
| 3 | N.C. | 9 | +5 V* |
| 4 | PB | 10 | GND |
| 5 | PB | Shell | FG |
| 6 | N.C. | | |

* Power supply to the gage head

Timing chart (normal)

1) Real-time pulse output (Phase-A wave advances when the spindle is retracted.)

- Output condition: Spindle speed ≤ 250 mm/s²
- Minimum edge-to-edge interval = Tr
- Output delay time*1: Max. 1 μs

LG100 origin point mark applied Timing chart (normal)

$\bar{\theta}Z$ with origin point signals is only output.

Minimum edge-to-edge interval/pulse width under each condition

| Model | Resolution | Tr | Te |
|-------|------------|-----------------------|-------------------|
| | | Tr (real-time output) | Te (error output) |
| LG100 | 1 μm | 0.4 μs | 0.4 μs |
| | 0.5 μm | 0.2 μs | 0.4 μs |
| | 0.1 μm | | |

Timing chart (occurrence of error)

- Output condition: Gage heads will identify an error under the following conditions and produce an output as described above.
 - Gage response speed*3 < Spindle speed
 - At a disturbance such as interference, vibration, etc.
- Minimum width of output pulses = Te

*1 Output delay time: Time until the counting pulse catches up to the spindle position.

*2 The actual limit of real-time pulse output will be depreciated to this value.

This is because actual detection signals unavoidably contain acceleration components in association with the spindle motion as well as error components from a little noise included in the signal itself. As a result, some burst pulses at a speed below the ideal conditions (i.e. ideal signal form at constant speed) may be generated.

*3 Gage respond speed: Refer to the specifications section in the User's Manual.

[IMPORTANT]

- Since any output during an error condition cannot be used as the attribute data, it is necessary to detect the error condition at the reception circuitry side.
- It is recommended to design user circuitry based on an IC chip that is capable of counting at 5 Mcps (equivalent to square wave of 1.25 MHz) or greater.

Head Specifications

Digimatic code

1. Pin assignments and signals

• Compatible socket:
Sumitomo 3M: V Low-Proheader
Model: 7610-5002XX or equivalent

| Pin No. | Signal | I/O | Description |
|---------|------------|--------|--|
| 1 | GND | — | Signal ground |
| 2 | DATA | Output | Measurement data-output terminal |
| 3 | CK | Output | Synchronized clock-output terminal |
| 4* | N.C. | — | Not used |
| 5 | REQ | Input | Input for data transmission request from external device |
| 6* | ORIG | Input | Input for absolute-origin setting signal |
| 7* | N.C. | — | Not used |
| 8* | N.C. | — | Not used |
| 9* | +5 V | — | Power supply (+5 V ± 10%) |
| 10* | GND (F.G.) | — | Frame ground |

* LGS uses a unique specification.
All others use the common Digimatic output specification (10-pin, square).

2. I/O electrical specifications

- Output terminal format: CK, DATA
N-channel open drain
Maximum output current:
400 μA max. (when $V_{OL}=0.4 V$)
Output withstand voltage: -0.3 V to 7 V
- Input terminal format: REQ, ORIG
Pull-up CMOS input
Internal power supply voltage: $V_{DD}=1.35$ to $1.65 V$
Pull-up resistance: $R1=10$ to $100 K\Omega$
"H" level input voltage: $V_{IH}=1.1 V$ min.
"L" level input voltage: $V_{IL}=0.3 V$ max.

Note: Since the power supply voltages are different between the gage side and the external device side, be sure to use an open collector or open drain circuit. Do not use CMOS output or similar.

3. Data format

- Data is output as 13-digit (52-bit) based on 4 bits=1 digit.
- Data is output in order from d1 to d13. Each digit is output in the order of LSB to MSB.

4. Timing chart

Standard (for reference)

| Symbol | min. | max. |
|--------|--------|-------|
| $t1^*$ | 0 | 2 sec |
| $t2$ | 15 μs | — |
| $t3$ | 100 μs | — |
| $t4$ | 100 μs | — |
| $t5$ | 0 | — |
| $t6^*$ | — | — |
| $t7^*$ | — | — |
| $t8^*$ | — | — |

LGS

| Symbol | min. | max. |
|---------|--------|--------|
| $t1^*$ | 30 μs | 95 ms |
| $t2$ | 15 μs | — |
| $t3$ | 100 μs | — |
| $t4$ | 100 μs | — |
| $t5$ | 0 μs | — |
| $t6^*$ | — | 100 μs |
| $t7^*$ | 100 μs | — |
| $t8^*$ | — | 30 ms |
| $t10^*$ | 1.5 s | — |
| $t11^*$ | — | 4 s |

- Note 1: The specifications indicated by an asterisk (*) are applicable only to LGS. All other Digimatic output specifications are common to all models.
- Note 2: Read data only when CK is at the "L" level.
- Note 3: Do not input REQ signal (fixed at "H") while the absolute origin is being set (during $t11$).
- Note 4: If $t5$, $t6$ and $t7$ are satisfied and REQ is continuously input, an output is obtained from LGS at intervals of approximately 95 ms.
- Note 5: Start inputting ORIG and REQ after two or three seconds have elapsed (the estimated time required for internal circuit/sensor to stabilize) following power-on.

Q Question
What is the absolute position origin point?

A Answer
The absolute position origin point is known as the origin point (0 point) that will never vanish even when power is turned off. The LGS Series is equipped with the absolute scale (electrostatic capacitance type ABS scale) that can set the absolute position origin point, thus always outputting the contact point position in reference to the last origin point when power is turned on again. This removes the necessity for adjustment with the master every time power is turned on and contributes significantly to automation of measurement.

Absolute Scale Device (Electrostatic capacitance type ABS scale device)

• Patent registered (Japan, USA, UK, Switzerland, Germany, Sweden)

- An absolute address is applied to individual absolute scales inside the main scale just like rail ties are numbered. A measured value is displayed by reading this absolute address from a slider position.

- The system uses 3 scales with a different wavelength while applying an absolute address on each scale.

Features

- A small, high-speed, space-saving counter for linear gage suitable for in-line and in-laboratory use. It brings visibility into the production site, improves productivity, and enables data accumulation.
- Up to 8 compact counters (EJ counters) can be linked providing the capacity to connect up to 16 gages.
- On a DIN rail, each unit can be connected directly without using cables, so it takes up minimal space. All linked units and gages can be driven by a single power source.

- Data can be output through an industrial interface (CC-Link) by linking a compact counter (EJ counter) with an interface unit. Constant data monitoring and positional management are performed. A USB interface is also provided for easy connection with a computer.
- Enables sum difference operations between 2 gages connected to the same counter.

SPECIFICATIONS

| 3 | O | GO | At an error display [+NG=-NG=L] | Yellow/black |
| 4 | O | -NG | | Yellow/red |
| 5 | I | HOLD | HOLD input | Bright green/black |
| 6 | I | P.SET | PRESET input (to cancel the error) | Bright green/red |
| | | | Other than the above listed shall be unconnected. | |

Note 1: Output from each pin in the Digimatic output mode may differ from those which are described in the table above.

Note 2: One end of the I/O cable (2 m, optional) consists of separate wires for connection as appropriate. The cable's F.G wire (with solderless terminal, green) should be connected to the grounding terminal of the main unit.

3) I/O circuit

1. Output circuit (-NG, GO, +NG)

Transistor is "ON" when the open-collector output is "L".

2. Input circuit (PSET, HOLD)

Input is valid when the line is "L".

4) Timing chart

1. Tolerance judgment output

* Varies depending on the gage.

2. External preset/HOLD

Note: Input is active when L1="H", 0="L".

5) Optional I/O cable (2 m)

EH Counter - Panel mount, Multi-function Type with RS-232C Communication Functions

Features

- 1-axis display type, and 2-axis independent display type or 2-axis type that can display sum/difference calculation results are available.
- Multi-functional counter with functions of zero-set, preset, and tolerance judgment
- Equipped with an RS-232C interface as standard. This allows data transfer to a personal computer, etc.
- A multi-point measuring system can easily be built up with the built-in networking function (RS link). (Max. 10 points)
- Employs the DIN size (144×72 mm) and mount-on-panel configuration, which greatly facilitates incorporation into a system.

Functions

Zero-set

Sets the displayed value to 0 at any position of the spindle.

Direction switch

Selects the counting direction of (+) or (-), whichever is convenient with a given direction of spindle movement.

Tolerance judgment indication/output

Sets two (or four) desired tolerances for three (or five) stages. Judgment results can be output to an external device.

External control

Zero set, preset and display hold can be controlled from the I/O terminals.

Preset

Presets the display at any value. Counting begins at the preset value.

Minimum reading digit change

To improve visualization of measurement data, the least significant digit can be extinguished. (However, the display via RS-232C and printing to a printer are performed down to the least significant digit.)

Sum/difference calculation

Enables measurement of thickness or step height using two gages.

Error message display

The counter displays an error message when a gage-head over-speed or breakage situation occurs. It outputs the error signal from the I/O terminal.

Peak hold/TIR measurement

Allows switching to the measurement mode for maximum value, minimum value, and run out value (maximum - minimum), in addition to the normal measurement mode.

Counting standby (to prevent malfunction at start-up)

This prevents malfunction due to power interruption, etc.

Communication via RS-232C interface

RS-232C allows communication with a personal computer. It allows not only the reading of measured values but also data transmission to the counter and remote operations, such as when changing various settings.

Digimatic output

Digimatic Mini-processor **DP-1VA LOGGER**. (RS-232C function is not available when the gage is connected to **DP-1VA LOGGER**.)

Counter Specifications

SPECIFICATIONS

1-axis input type and 2-axis input type counters are available.

▼

- 1 2 3 4 5 6 0 1

Note: Negative logic output is possible for SIGN, BANK, PEAK, DATA (PNo.21=1).

Simple analog output

Monitoring of output waveforms is possible with an analog recorder connected.

1) Output specification

Output voltage = 2.5 V+ [counter value] × [voltage resolution] (0.75 mV)
 Range: 1.0 to 4.0 V
 Update time : 5 ms (Delay time: 10 ms)
 Accuracy : ±1% (1 to 4 V)
 Accuracy is rated at 4 V level
 Load resistance : 300 KΩ or more

2) Measuring range

| Parameter | Measuring range (mm)/Resolution (mm) | | |
|-----------|--------------------------------------|----------------|------------------|
| | 10 μm gage | 1 μm gage | 0.1 μm gage |
| 0 | ±19.99 (0.01) | ±1.999 (0.001) | ±0.1999 (0.0001) |
| 1 | ±199.90 (0.1) | ±19.990 (0.01) | ±1.9990 (0.001) |
| 2 | ±1999.00 (1) | ±199.900 (0.1) | ±19.9900 (0.01) |

RS Link* Function

It is possible to connect a maximum of 10 counter units together to carry a maximum of 20 channels of multi-point measurement at a time.

For this connection use a dedicated RS link cable; **02ADD950** (0.5 m), **936937** (1 m) or **965014** (2 m) (The maximum total length of RS link cables permitted for the entire system is 10 m.)

* Patent registered (Japan, U.S.), Patent pending (E.U.)

Note: Only the Mitutoyo software "SENSORPAK" can be used when a USB cable is connected.

RS-232C Communication Functions

Makes it possible not only to log measured values but also make various remote settings including the zero-setting of a counter, etc. To communicate data with a PC, terminal software is needed that should be provided by the customer.

| Command format | Corresponding output | Function |
|---------------------|--------------------------|---|
| GA**CRLF | G##, +01234.567CRLF | Outputs the [Displayed value] through RS-232C |
| CN**CRLF | CH**CRLF | Switches the display to the [Current value] |
| CX**CRLF | CH**CRLF | Switches the display to the [Maximum value] |
| CM**CRLF | CH**CRLF | Switches the display to the [Minimum value] |
| CW**CRLF | CH**CRLF | Switches the display to the [TIR (runout)] |
| CR**CRLF | CH**CRLF | Zerose |
| CI**CRLF | CH**CRLF | Clears the peak value |
| CP**, +01234567CRLF | CH**CRLF | Inputs the preset value |
| CD**, +01234567CRLF | CH**CRLF | Inputs tolerance value S1 |
| CE**, +01234567CRLF | CH**CRLF | Inputs tolerance value S2 |
| CF**, +01234567CRLF | CH**CRLF | Inputs tolerance value S3 |
| CG**, +01234567CRLF | CH**CRLF | Inputs tolerance value S4 |
| CS**CRLF | CH**CRLF | Cancel the error |
| CK**CRLF | CH**, \$CRLF (\$=0 or 1) | Checks the HOLD status |

** : denotes a gage channel number between 01 and 99 ("00" means all channels).

: denotes the type of data [N: Current value, X: Maximum value, M: Minimum value, W: TIR (runout)].
 CRLF: CR (carriage return), LF (line feed).

Note 1: For presetting and tolerance limit setting, enter each value consisting of a sign and 8 digits of numeric value without a decimal point.

Note 2: Perform the tolerance limit setting in the order of CD and CG for the case of 3-step tolerance judgment, and in the order of CD, CE, CF, and CG for the case of 5-step tolerance judgment.

Note 3: The RS communication function will be suspended during key operation (e.g. setting parameters, preset values, or tolerance limits). It automatically resumes the command and data output operation when the gage is recovered to such a condition that the counting is possible.

Note 4: For canceling the counting-standby state, use CS00CRLF (specification of all channels).

RS-232C specifications

1) Compatible plug: D-sub9 pin (female), inch thread specification

2) Pin assignment

Receptacle D-sub9 pin (male) inch thread specification

| Pin No. | Description | I/O | Function |

*1 During input the decimal point will be flashing.

*2 During input the UNIT indicator will be flashing.

3) I/O circuit

1. Output circuit:

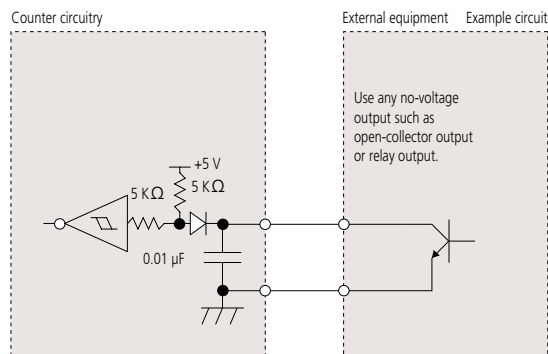

NOM, AL1 to AL5, BL1 to BL5 Transistor is "ON" to drive the line to "L" (open-collector output).

Supply voltage: Max. 24 V
Output current: Max. 10 mA
Output saturation voltage: Max. 0.7 V

2. Input circuit:

PA, PB (only with **542-062**), HOLD Input is valid when the line is "L".

Input current: I_{MAX} 1 mA
Input voltage: H=4 to 24 V
L=Max. 1 V

Output saturation voltage: Max. 0.7 V or less

4) Timing chart

1. Power ON characteristics

Note: With the RS link established the reference counter will be the one that was powered on last.

3. External preset (PA, PB) input

Note: Excluding the period during key input, RS-232C communication or Digimatic processing.

5. RS-232C command input and response output

Note: Excluding the period during key input, RS-232C communication or Digimatic processing.

2. Tolerance judgment result output period

4. Peak clear input

(After inputting HOLD, or simultaneous input with the preset value)

*1 () represents the case either in peak mode or in such a mode that an input of HOLD triggers RS-232C output.

*2 Case in such a the mode that input of HOLD triggers RS-232C output.

Note: The PRESET indicator will be flashing during the input operation of HOLD.

Origin Point Mark Detection (EH-102Z, EJ-102N)

Note: The linear gage used in the above example is the **LG100**, which has a measuring range of 10 mm. This linear gage has its origin point marked at a position approximately 3 mm from the limit of the spindle extension. In the case of 25/50 mm-stroke types the origin point mark is positioned approximately 5 mm from the spindle extension limit.

Origin Point Mark Detection Procedure

1. Turn the display unit connected to the gage head to ON. (The offset register is set to zero at this stage.)
2. Displace the gage head spindle approximately more than 3 mm from the spindle extension limit position to make it pass over the origin point mark.
3. The display unit will automatically read the origin point and zero-set itself.
4. Bring the gage head contact point into contact with the master gage as shown.
5. The display unit indicates the displacement from the origin point position. (Offset register still contains zero.)
6. Input the preset value (the calibrated size of the master gage, 12.000).
7. Remove the master gage so that the spindle extends to its limit.
8. The display unit displays position of the contact point relative to the datum surface.
9. Turn OFF the display unit.
10. Turn ON the display unit.
11. Displace the gage head spindle approximately more than 3 mm from the spindle extension limit position to make it pass over the origin point mark.
12. The display unit will automatically read the origin point and the displayed value will effectively start from the stored offset register value (0.000+8.000=8.000).
13. The contact tip can now be brought into contact with the workpiece to make the measurement and the display will indicate the workpiece size (4.025+8.000=12.025).

SENSORPAK

Measurement data acquisition software for EH, VL

MeasurLink® ENABLED

Data Management Software by Mitutoyo

- This software facilitates loading measurement data onto a personal computer from a linear gage counter with RS-232C output (**EH**), or from a Litematic display (**VL**).
- 20 channels (max.) of measurement data can be processed.
- Arithmetical calculations and maximum width calculations can be performed using the measurement data.
- Exporting measurement data into MS-Excel format is supported.
- Real time graphical display by means of bar-graph or meter is provided.

Measurement screen 1

Meter screen 2

| Calculation | Calculation (up to 30 items) between designated gages is available. |
| Functions | Calculation items: Sum, difference, total, average, maximum, minimum, range (maximum–minimum), calculation with a constant |
| Tolerance judgment | Per item: Displays the result in colors (3-step tolerance: red/green/red; 5-step tolerance: red/yellow/green/yellow/red) Total judgment: Displays in colors (red/green) by monitoring the multiple gages and calculation result |
| Recording*2 | Items: channel values, calculation result, tolerance judgment, total tolerance judgment, timestamp Max. number of records: 60000 for software recording (with 6 gages connected); up to 27000 (with 20 gages connected) Output function: Direct output to Excel, CSV file output (compatible with MeasurLink®) Recording trigger: key, timer, external TRG |
| Input/output*3 | Input: TRG for recoderding (HOLD) Output: Total tolerance judgment result |
| System environment | DOS/V compatible PC environment CPU: Pentium4 2 GHz or more, Memory: 2 GB or more, Hard disk: 2 GB or more free space OS: Windows 7 (32 bit/64 bit), Windows 8.1 (32 bit/64 bit), Windows 10 (64 bit) |

*1 If the PC is not equipped with an RS-232C port, please contact the nearest Mitutoyo sales office/service center.

*2 Display cycle and the maximum number of records differ depending on the environment (specification of PC, number of connected gages, display format and communication setting).

*3 With use of the I/O cable (accessory). When an I/O cable is not used, the I/O connector of connector of the counter alternatively functions.
 (Refer to the user's manual of the counter in use.)

Linear Gage Accessories (Optional)

Optional gage head accessories

Various Contact Points/Extension Rods (Interchangeable dial indicator contact points are also available.)

- All threads of interchangeable contact points are M2.5 (P=0.45) x5 mm.
- If any contact point is replaced with another, firmly attach it so that it cannot become loosened during use. (Recommended tightening torque=50 N·cm)
- A carbide contact point is particularly good at resisting to abrasion.

ø3 mm Ball Points

Standard contact point.

Flat Points

Convenient to use if the feature to be measured is convex.

(Flatness: 3 µm)

(Flatness: 5 µm)

Unit: mm

| L | Order No. | D | Order No. |
|----|-----------|----|-----------|
| 8 | 131365 | 10 | 101117 |
| 10 | 21AAA340 | 15 | 21AAA341 |
| | | 20 | 21AAA342 |
| | | 25 | 21AAA343 |
| | | 30 | 21AAA344 |

Note: If perpendicularity to the stem and parallelism with the reference plane are required using a flat contact point, extra adjustment in conjunction with the linear gage is necessary. Consult with Mitutoyo as a custom-made option.

Shell Type Points

Contact point with a large radius. Optimal for use on flat surfaces.

Unit: mm
Material: Hardened steel

| øD | SR | L | Order No. |
|----|-----|----|-----------|
| 5 | 2.5 | 5 | 101386 |
| | | 10 | 101118 |
| | | 15 | 137393 |
| | | 20 | 101387 |
| | | 25 | 101388 |
| | | 30 | 21AAA254 |

Ball Points

Convenient to measure a depressed feature on a workpiece.

Unit: mm
Material: Hardened steel

| øD | Spherical tip material | Order No. |
|-----|------------------------|-----------|
| 1 | Carbide | 21AAA349 |
| 1.5 | | 21AAA350 |
| 1.8 | Hardened steel | 101122 |
| 2.5 | Carbide | 21AAA351 |
| 4 | | 21AAA352 |

Spherical Points

Unit: mm
Material: Hardened steel

| D | ø5.5 | ø8 | ø10 |
|-----------|--------|--------|--------|
| SR | 5 | 5 | 7 |
| L | 3 | 5 | 5 |
| Order No. | 111460 | 125258 | 101119 |

Flat Points (Carbide)

Material: Carbide

The dimension in parentheses is only applied to Order No.120042.

120056

Unit: mm
Flatness: 3 µm

| ød | D | L | Flatness | Order No. |

|-----------------|-----|----|-----------|
| 3 | 6.4 | 7 | 137255 |
| 4.5 | 8 | 9 | 137399 |

(Flatness: 3 µm)

Note: If perpendicularity to the stem and parallelism with the reference plane are required using a flat contact point, extra adjustment in conjunction with the linear gage is necessary. Consult with Mitutoyo as a custom-made option.

Spherical Points (Carbide)

Note: Diameter d is available up to ø40 as a custom order.

Unit: mm
Material: Carbide
(spherical tip surface only)

| L | | D | ø5.2 | ø7.5 | ø10.5 |
|----|-----------|---|--------|--------|--------|
| SR | | | 5 | 7 | 10 |
| 5 | Order No. | | 120058 | — | — |
| 10 | Order No. | | — | 120059 | 120060 |

Needle Points

Suitable for probing the bottom of a groove or hole.

Unit: mm
Material: Hardened steel

Note: Contact Mitutoyo to inquire about specifications such as tip SR: 0.2 or more and l : up to 40.

| Order No. | l | L |
|-----------|-----|----|
| 101121 | 11 | 15 |
| 137413 | 13 | 17 |
| 21AAA255 | 21 | 25 |
| 21AAA256 | 31 | 35 |

Needle Points (Carbide)

Unit: mm
Material: Carbide

| D | l | 3 | 5 | 8 | 10 | 13 |
|-------------|-----------|--------|----------|----------|----------|--------|
| $\phi 0.45$ | Order No. | 120066 | 21AAA329 | — | — | — |
| $\phi 1$ | Order No. | 120065 | 21AAA330 | 21AAA331 | 21AAA332 | — |
| $\phi 1.5$ | Order No. | — | 21AAA335 | — | 21AAA336 | 120064 |
| $\phi 2$ | Order No. | — | — | 137257 | — | — |

| D | l | 18 | 20 | 28 | 40 |
|------------|-----------|----------|----------|----------|----------|
| $\phi 1$ | Order No. | — | 21AAA333 | — | 21AAA334 |
| $\phi 1.5$ | Order No. | — | 21AAA337 | — | 21AAA338 |
| $\phi 2$ | Order No. | 21AAA257 | — | 21AAA258 | 21AAA339 |

Note: A different specification is available as a custom order.

Blade Points (Carbide)

Convenient for cylinder measurement, etc.

Unit: mm
Material: Carbide

| D | H | 0.4 | 0.6 | 1 |
|----------|-----------|--------|--------|--------|
| $\phi 2$ | Order No. | 120061 | 120062 | — |
| $\phi 4$ | Order No. | — | — | 120063 |

Note: If perpendicularity to the stem, parallelism with the reference plane, and different contact point orientation are required using a blade contact point, extra adjustment in conjunction with the linear gage is necessary. Consult with Mitutoyo as a custom-made option.

Conical Points

Used for positioning the measurement point. Since it can damage a workpiece easily, it is not suitable for use on soft materials.

Unit: mm

Material: Hardened steel

90° Conical Points (Carbide)

Unit: mm
Material: Carbide

Note: Angles other than 90° are available as a custom order.

Knife Edge Point (Carbide)

Suitable for measuring narrow groove diameter, etc.

Unit: mm
Material: Carbide

Note: Diameter D more than $\phi 0.5$ and length/ between 5 and 40 are available as a custom order.

Extension Rods

Unit: mm
Material: Stainless steel

| L | Order No. | L | Order No. |
|----|-----------|-----|-----------|
| 10 | 303611 | 55 | 21AAA259G |
| 15 | 21AAA259A | 60 | 304146 |
| 20 | 303612 | 65 | 21AAA259H |
| 25 | 21AAA259B | 70 | 21AAA259J |
| 30 | 303613 | 75 | 21AAA259L |
| 35 | 21AAA259C | 80 | 21AAA259M |
| 40 | 21AAA259D | 90 | 304147 |
| 45 | 21AAA259E | 100 | 303614 |
| 50 | 21AAA259F | | |

Roller Points

Unit: mm
Roller part material: Hardened steel
Roller run-out: 10 μ m

Note 1: A different ϕD is available as a custom order.

Note 2: A high-accuracy type with a roller run-out of 5 μ m is available. (Custom-made option)

901954

Quick Guide to Precision Measuring Instruments

Quick Guide to Precision Measuring Instruments

Gage Head

Plain Stem

The plain stem has the advantage of wider application and slight positional adjustment in the axial direction on final installation, although it does require a split-fixture clamping arrangement or adhesive fixing. However, take care so as not to exert excessive force on the stem.

Measuring Force

This is the force exerted on a workpiece during measurement by the contact point of a linear gage head, at its stroke end, expressed in newtons.

Comparative Measurement

A measurement method where a workpiece dimension is found by measuring the difference in size between the workpiece and a master gage representing the nominal workpiece dimension.

Ingress Protection Code

| Protection code | Type | Level | Description |
|-----------------|--|-------------------------|---|
| IP66 | Protection against contact with the human body and foreign objects | 6: Dust tight | Protection from dust ingress Complete protection against contact |
| | Protects against exposure to water | 6: Water-resistant type | Water jets directed against the enclosure from any direction shall have no harmful effects. |
| IP67 | Protection against contact with the human body and foreign objects | 6: Dust tight | Protection from dust ingress Complete protection against contact |
| | Protects against exposure to water | 7: Immersion-protection | Protection against the effects of immersion in water between 1 cm and 1 m for 30 minutes |

Precautions in Mounting a Gage Head

- Insert the stem of the gage into the mounting clamp of a measuring unit or a stand and tighten the clamp screw.
- Notice that excessively tightening the stem can cause problems with spindle operation.
- Never use a mounting method in which the stem is clamped by direct contact with a screw.
- Never mount a linear gage by any part other than the stem.
- Mount the gage head so that it is in line with the intended direction of measurement. Mounting the head at an angle to this direction will cause an error in measurement.
- Exercise care so as not to exert a force on the gage through the cable.

Precautions in Mounting LGH Series

To fix the **LGH Series**, insert the stem into the dedicated stand or fixture.

Recommended hole diameter on the fixing side: 15 mm +0.034/+0.014

- Machine the clamping hole so that its axis is parallel with the measuring direction. Mounting the gage at an angle will cause a measuring error.
- When fixing the **LGH Series**, do not clamp the stem too tightly. Overtightening the stem may impair the sliding ability of the spindle.
- If measurement is performed while moving the **LGH Series**, mount it so that the cable will not be strained and no undue force will be exerted on the gage head.

Counter

Zero-setting

The display value can be set to 0 (zero) at any position of the spindle.

Note: Perform the zero-setting beyond 0.2 mm stroke from the rest position. This puts the spindle in the guaranteed accuracy region.

Presetting

Any numeric value can be set on the display unit for starting the count from this value.

Note: Perform the zero-setting beyond 0.2 mm stroke from the rest position. This puts the spindle in the guaranteed accuracy region.

Direction Changer

The measuring direction of the gage spindle can be set to either plus (+) or minus (-) of count.

MAX, MIN, TIR Settings

The display unit can hold the maximum (MAX) and minimum (MIN) values, and the run out value (TIR) during measurement.

Tolerance Setting

Tolerance limits can be set in various display units for automatically indicating if a measurement falls within those limits.

Open-collector Output

An external load, such as a relay or a logic circuit, can be driven from the collector output of an internal transistor which is itself controlled by a Tolerance Judgment result, etc.

Digimatic Code

A communication protocol for connecting the output of measuring tools with various Mitutoyo data processing units. This allows output connection to a Digimatic Mini-processor **DP-1VA LOGGER** for performing various statistical calculations and creating histograms, etc.

BCD Output

A system for outputting data in binary-coded decimal notation.

RS-232C Output

A serial communication interface in which data can be transmitted bi-directionally under the EIA Standards. For the transmission procedure, refer to the specifications of each measuring instrument.

CC-Link

An abbreviation of Control & Communication Link, the new open field network developed by Mitsubishi Electric Corporation. It is a high-speed field network that allows for control and communication at the same time.

Before using the gage head

Avoid installing the gage in locations where:

- The gage will be exposed to direct sunlight, or where the ambient temperature may drop below 0 °C or exceed 50 °C*.
- The relative humidity may drop below 20% RH or exceed 80% RH, or where a sudden change in temperature may cause condensation.
- The gage would be subject to corrosive gas, or where combustible materials are placed nearby.
- The gage is subject to air containing significant amounts of dust, salt or iron powder.
- The gage is subject to direct vibration or shock.
- The gage may come in contact with splashed water, oil or chemicals. (The gage system components are not designed for protection against water, oil or chemical attack, except for the gage unit.)
- Electronic noise is likely to affect the gage.

* 0 to 50 °C for LG100 Series, EJ counter and Interface unit

Our Linear Gage Series products conform to the EMC Directive and the UK's Electromagnetic Compatibility Regulations.

- EMC Directive/Electromagnetic Compatibility Regulations: EN61326-1

Preventing electrical interference

- Bundling the sensor cable with high-voltage lines or power lines may cause the gage to malfunction. The sensor cable run should be completely separate.

Power supply to the display unit

- If a generic switching regulator is used, provide grounding via the frame's ground terminal or ground terminal of the power supply.
- If a malfunction occurs due to superimposed noise on the power-supply line, use a DC-regulated power supply that incorporates an isolation transformer.

About grounding

- Avoid sharing the frame ground (F.G.) terminal of this unit with the high-power line grounding but separately connect it to Class 3 Grounding.

Handling precautions

- This product is a precision measuring instrument. Avoid dropping or otherwise subjecting it to impact.
 - The spindle of the gage head is connected to the body via a spring. Be careful not to pull the spindle in the extending direction or rotate it with force. Doing so may cause permanent distortion and damage to the spring.
 - The gage is shipped with a standard contact point (901312) installed on the spindle. This contact point can be replaced with a different type that best suits the shape of the workpiece feature to be measured. (See page 52, 53.)
- When installing or removing a contact point, locate the key wrench provided in the wrench groove in order to keep the spindle from rotating. Then grip the contact point with pliers to install or remove it. When gripping the contact point with pliers, insert a piece of felt or other soft packing between the jaws and the point to protect it from damage.
- Do not use both ends of the stroke as an origin (zero) point.

Precautions in mounting a Linear Gage

LG100 / LG200 series

The following illustrate important points to which customers should pay attention. Refer to these when using gage heads and counters.

Replacing the contact point

【How to install/remove the contact point】

The contact point is interchangeable according to the application. When installing or removing a contact point, locate the key wrench provided in the wrench groove in order to keep the spindle from rotating. Then grip the contact point with pliers to install or remove it. When gripping the contact point with pliers, insert a piece of felt or other soft packing between the jaws and the point to protect it from damage.

LG100/LG200 Series Mounting the thrust stem

If the thrust stem is retrofitted, the gage can be fixed more steadily and easily only by drilling a $\varnothing 9.5$ hole on a plate with a thickness of about 10 mm. To mount the thrust stem, fit the special wrench (optional) in the wrench groove in the middle of the main unit, and then fasten the clamp nut with the standard-supplied wrench while holding the knurled part by hand. Take care not to hold the cable receptacle on the main unit, otherwise the gage may be damaged due to torque caused by twisting.

Note 1 Refer to page 21.

Precautions in mounting a Linear Gage

LGH Type

Mounting the gage

A LGH can be mounted by inserting its stem in the mounting hole of a dedicated stand or other equipment.

Recommended mounting hole diameter in fixture: **15 mm** ± 0.024 ± 0.006

- The mounting hole shall be machined parallel with the direction of measurement. Cosine-effect measurement error will occur if the gage is misaligned with this direction.
- Excessive force in tightening the stem will affect smooth spindle motion and should be avoided.
- In applications where a LGH is subject to movement, ensure that the mounting is designed to avoid the cable being dragged when in motion.

Precautions for measurement:

- To help ensure accuracy, allow 30 minutes warm-up time for the system after powering ON.
- Allow sufficient time for temperature stabilization for both the gage and workpieces to be measured.
- Thoroughly clean the contact point and all surfaces to be measured before measurement to avoid accuracy degradation due to dust or grease.
- Be aware of possible overspeed errors if the contact point is allowed to drop significantly from surface to surface on the workpiece. Appropriate measuring procedures should always be used with due consideration for the part features.

Applies to all linear gages

Mounting the gage head

- Insert the stem of the gage into the mounting clamp of a measuring unit or a stand and tighten the clamp screw.
- Notice that excessively tightening the stem can cause problems with spindle operation.
- Never use a mounting method in which the stem is clamped by direct contact with a screw.
- Never mount a linear gage by any part other than the stem.
- Mount the gage head so that it is in line with the intended direction of measurement. Mounting the head at an angle to this direction will cause an error in measurement.
- Exercise care so as not to exert a force on the gage through the cable.

Examples of the plain-stem mount

- The recommended clamping torque is 0.4 to 0.5 Nm. Over-tightening the stem clamp will prevent smooth movement of the spindle. Ensure the spindle can move freely after clamping.

About dust/water protection

- The preamplifiers and counters are not designed to be dust- or water-proof. Install them in places where they will not come into direct contact with dust, water or oil.
- When an extension cable is used, seal the preamplifier connection and connectors completely, making sure no portion is left exposed.
- If the cable cover is damaged, water or other liquids may enter the gage due to capillary effect, causing gage failure. If the cable cover becomes damaged it should be repaired or replaced immediately.
- Handle the gage with due caution to make sure that the rubber boot will not be damaged by scuffing, etc. If the rubber boot is damaged, the gage can no longer be protected from dust or water ingress. When damage is found, repair or replace the boots immediately.
- The rubber material used for the boots and seals does not provide complete protection against coolants and chemicals, which are becoming increasingly complex in composition. If rubber parts are found to have deteriorated significantly, contact your nearest Mitutoyo office.
- The gage must not be disassembled, since it will break the seals of various components. Never attempt to disassemble the gage. Doing so will prevent the gage from functioning to its original specifications.

Whatever your challenges are, Mitutoyo supports you from start to finish.

Mitutoyo is not only a manufacturer of top quality measuring products but one that also offers qualified support for the lifetime of the equipment, backed by comprehensive services that ensure your staff can make the very best use of the investment.

Apart from the basics of calibration and repair, Mitutoyo offers product and metrology training, as well as IT support for the sophisticated software used in modern measuring technology. We can also design, build, test and deliver measuring solutions and even, if deemed cost-effective, take your critical measurement challenges in-house on a sub-contract basis.
